OUR PRODUCTS TAKE CARE OF YOURS

Switch to paper. Lower cost. Same protection.

PaperJet

Paper Cushion Packaging Machine

Plastic-free product wrapping and void fill with the same protection as traditional plastic bubble wrap. Turn flat kraft paper into shock-absorbing packaging on demand directly at the packing station.

The fully automatic system reduces plastic waste, minimize storage, and enables a switch to fully recyclable packaging.

Key Benefits

Plastic-free alternative
Replace bubble wrap with 100% recyclable paper

On-demand production
Eliminate storage for bulky packaging materials

Strong cushioning
Reliable protection performance for fragile goods

Lower material cost
Paper is more cost-efficient than plastic film

Compact design
Fits seamlessly into any packing environment

Sustainable packaging
Reduce plastic waste and improve eco footprint

Plug & play
No installation or operator training required

Cost Example

Already at low shipping volumes, significant savings can be achieved*:

5 shipments / day	110 shipments / month
Current Cost w/ pre-made void fill ~~€27.50~~ / month	**With PaperJet** €6.16 / month
Your annual savings min. €256	

Best suited for Businesses with ongoing shipping needs and fragile goods across e-commerce, logistics and industrial applications.

*) Conservative example based on low filling material costs of €0.25/package for pre-made plastic bubble wrap.

Designed for modern packing environments

Compact paper cushioning system for on-demand production of traditional plastic-based bubble-style protective packaging.

Packaging Contains

- PaperJet Machine
- Power Cable
- User Manual

Technical Specifications

Parameter	Specification
Model	PaperJet
Material used	Kraft paper
Max Input Width	40 cm
Produces	Paper bubble cushioning material
Structure	Embossed concave-convex pattern
Power	130W
Voltage	220V
Weight	30 kg
Operation	Electric, Plug&Play
Application	Wrapping & cushioning

Functions

- Converts flat kraft paper into bubble-style cushioning material
- Continuous feeding for efficient packaging processes
- Embosses paper into a 3D concave-convex structure for shock absorption
- Compact design for workstation integration
- Provides reliable protection for fragile goods
- Easy operation with minimal setup
